Venting an 'S' trap water closet pan

© BRANZ 2009

- The vent must be connected to the discharge stack.
- It must be clear of any pressure zones.
- An alternative vent connection point can be used as an air admittance valve.
- The vent must be connected within 1.5 m of the trap (to the area coloured green).
- The vent must not be connected within 300 mm of a bend on the vertical section.
- It must be connected to the discharge stack clear of any pressure zones.
